ABSTRACT OF THE DISCLOSURE

A water toy is provided. The water toy includes a housing (15) and an inlet (54) for directing liquid into the housing. The water toy also includes a distribution assembly (30) disposed in the housing and coupled in fluid communication with the inlet. The water toy further includes a plurality of outlets (61), each adapted to direct a stream of liquid (12) out of the housing, the outlets coupled in fluid communication with the distribution assembly, wherein the distribution assembly intermittently directs a stream of liquid (12) out of each of the outlets.
